

Agricultural Water Solutions

Optimize the use of valuable nutrients and water assets

How it improves wells

Our advanced nutrient-control technologies help agricultural businesses manage high volumes of liquid and solid waste. We optimize your water use and maximize your recovery of valuable solids material. Our solutions are scalable to meet wastewater treatment requirements of small, medium, and large concentrated animal feeding operation (CAFO) farm classifications.

Reductions

- Reduces liquid and solid wastes
- Lowers lagoon management costs
- Reduces hauling costs by up to 50%
- Saves fertilizer
- Reduces odor
- Decreases groundwater contamination
- Reduces pathogens

Benefits

- Enables precise nutrient management
- Increases crop yield by up to 20%
- Creates clean, reusable water
- Produces value-added, organic fertilizer
- Condenses storage volume
- Increases land application
- Enables larger herds per acre
